

DinaSaw Bandsaw Sharpener

Features:

- Fully automatic
- Easy screw adjustment
- 12 volt operation
- Integral stand
- Grinds either MSA or standard
- High speed grind motor (6000rpm)

Benefits:

- Saws stay sharper longer
- Less sawdust remains on lumber
- Teeth require less set

Normal sharpeners can only sharpen perpendicular to the blade - the **patented** DinaSaw MSA sharpeners can also sharpen with a positive 10 degree angle across the set teeth's tips to enhance cutting and sawdust extraction.

The saw's set teeth do the majority of the work and angling their cutting face produces larger chips that are directed towards the centre so they are better retained in the gullet.

Standard, straight sharpened teeth generate smaller chips that are forced directly down to spill beside the blade causing friction that heats and buckles the blade.
